Pages: 2020.04.22.20075564

Abstract:

Background: We evaluated the clinical performance of an immunochromatographic (IC) IgM/IgG antibody assay for severe acute respiratory syndrome coronavirus 2 (SARS-CoV2) and chest computed tomography (CT) for the diagnosis of Coronavirus disease 2019 (COVID-19). Methods: We examined 139 serum specimens collected from 112

Adding Files From the Web Page –Google Scholar

The screenshot shows the Google Scholar search results for 'covid-19'. The search bar contains 'covid-19' and the results show approximately 2,12,000 results. The first article is 'COVID-19: consider cytokine storm syndromes and immunosuppression' by P Mehta, DF McAuley, M Brown, E Sanchez, et al. The second article is 'Presumed asymptomatic carrier transmission of COVID-19' by Y Bai, L Yao, T Wei, F Tian, DY Jin, L Chen, M Wang, et al. The third article is 'COVID-19 and Italy: what next?' by A Remuzzi, G Remuzzi, et al. The fourth article is 'An interactive web-based dashboard to track COVID-19 in real time' by E Dong, H Du, L Gardner, et al.

The Web Importer sidebar is open on the right, showing a list of selected articles. The 'Select all' button is set to 'My library'. The selected articles are:

- 2020 Hubei Lockdowns
Mark S. Riddle, Bradley A. Connor et al.
Journal of Travel Medicine, 24, Suppl 1, 2020
PDF not found
- COVID-19: consider cytokine storm syndromes and immunosuppression PDF
Puja Mehta, Daniel F McAuley et al.
The Lancet, 395, 2020
[View PDF](#)
- Presumed asymptomatic carrier transmission of COVID-19

The 'View library' button is highlighted with a red box. A red arrow points from the 'View library' button back to the search results.

My Library Clinical evaluation of an im...

8.0 %, and 62.5 %, respectively. Among the 48 non-COVID-19 serum specimens, 1 generated a false-positive result for IgM. Thirty-eight of the 112 COVID-19 patients were asymptomatic, of whom 15 were positive for IgM, and 74 were symptomatic, of whom 22 were positive for IgM and 7 were positive for IgG. The diagnostic sensitivity of CT scan alone and in combination with the IC assay was 57.9 % (22/38) and 68.4 % (26/38) for the asymptomatic patients and 74.3 % (55/74) and 82.4 % (61/74) for the symptomatic patients, respectively. **Conclusion: The IC assay had low sensitivity during the early phase of infection, and thus IC assay alone is not recommended for initial diagnostic testing for COVID-19. If RT-qPCR is not available, the combination of chest CT and IC assay may be useful for diagnosing COVID-19.**

1. Introduction

The severe acute respiratory syndrome coronavirus 2 (SARS-CoV2) epidemic, which causes the novel coronavirus disease 2019 (COVID-19), was first reported in December 2019 in Wuhan, China [1], and it has since been declared a pandemic by the World Health Organization. The ongoing outbreak is a global threat to human health. Quantitative reverse-transcription polymerase chain reaction (RT-qPCR) analysis for

because it requires special equipment, a time-consuming protocol, and highly skilled laboratory technicians. In addition, because RT-qPCR requires samples from the upper and lower respiratory tracts, the process of collecting samples and extracting RNA increases the risk of exposure to viral droplets. Therefore, an alternative diagnostic test to RT-qPCR is desirable for the clinical management of COVID-19.

In studies conducted in China, chest computed tomography (CT) scans were widely utilized as a diagnostic tool for COVID-19 [2-4].

Writing and Citing- Changing Citing Styles

The screenshot shows the Microsoft Word interface with the References tab selected. The 'Open Mendeley' button is highlighted with a red rectangle. Below it, a dropdown menu is open, displaying a list of citation styles. The 'American Sociological Association' style is currently selected and highlighted in grey. Other styles listed include American Medical Association 11th edition, American Political Science Association, American Psychological Association 7th edition, Chicago Manual of Style 17th edition (author-date), Cite Them Right 10th edition - Harvard, IEEE, Modern Humanities Research Association 3rd edition (note with bibliography), Modern Language Association 8th edition, Nature, and More Styles... The 'Insert Citation' button is visible on the left side of the References ribbon.

Modify your citing style anytime

Mendeley Desktop uses the [Citation Style Language](#) (CSL) standard.

CSL is an open standard to define styles. The styles are processed using [citeproc-js](#).

Mendeley regularly fetches new styles from Citation Styles project [repository](#). Any new styles you create can be submitted to this repository.

You can edit styles, or create new styles using the [CSL Editor](#) (right-click on an installed style to open it in the web-based editor).

All styles are offered under the [Creative Commons Attribution-ShareAlike 3.0](#) license.

Use CSL to make your own citation style

About

I qualified in Anatomy (1st Class degree) from UCL London in 1972 and in Medicine (UCL) in 1975. I moved into academic surgery and was Lecturer in Surgery in Leeds, in Urological Surgery in Newcastle. I was appointed to the Chair of Surgery in Newcastle in 1992, I was Director of Research at the Medical School and on the Trust Board at the NHS. I was
